Case Information:

Date Submitted Jun 17, 2021 9:23:55 AM
Species Chickens/Broilers
Number of Animals 30000
Location of Animals [REDACTED]
Reason for Use Prophylaxis
Drugs Administered

Drug Trade Name	Generics	Route	Dose	Diseases
Nicarb®	• nicarbazin	Oral - Feed	50 ppm (in feed) Continuously for 15 days	• Alimentary: coccidiosis
Bio-Cox® 120 G	• salinomycin sodium	Oral - Feed	48 ppm (in feed) Continuously for 15 days	• Alimentary: coccidiosis

Response and Recommendation: 4 days

Nicarbazin is approved for use in chickens (up to 12 weeks of age) for the prevention of coccidiosis up to 200 ppm with no limit to the duration of treatment. When used according to the label directions, the withdrawal time of nicarbazin is 4 days for meat. Salinomycin is approved for broiler chickens for the prevention of coccidiosis at 60 ppm to be fed continuously up to marketing with a zero day withdrawal time. We are not aware of any interaction between these drugs that would require further extension of the withdrawal periods. Therefore, we recommend following a withdrawal interval of at least 4 days for this combination.

Therefore, the Canadian gFARAD recommends a withdrawal interval of 4 days, which should be sufficient so that detectable residues are not found. Furthermore, this recommendation for residue avoidance does not address the risks of developing or transmitting antimicrobial resistance from

treated animals to other animals or humans following the extralabel use of this antimicrobial. Because the Canadian gFARAD withdrawal recommendation is not an official withdrawal time and is based on data that has not been reviewed nor approved by the Veterinary Drugs Directorate or the Canadian Food Inspection Agency, responsibility for residue violations rests with the attending veterinarian.
